The use of this Expert Intelligence Report (the "Report") should not be construed to constitute legal advice or provide a substitute for reviewing the qualifications of experts independently. Thomson Reuters Expert Witness Services ("TREWS") compiles the information in the Report from a variety of sources ("Sources"). Although TREWS uses commercially reasonable efforts to accurately summarize and report the information obtained from its Sources, TREWS is not responsible for errors or omissions in the Report, and does not warrant the

accuracy of its Sources' information. TREWS is also not responsible for information or content contained in any links to websites included in the Report and cannot guarantee that any links included herein will continue to be active or contain the referenced material indefinitely.

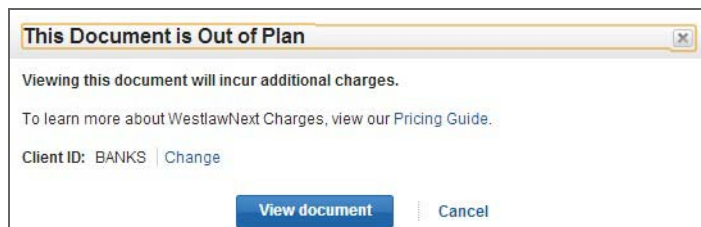

Information

NOTE REGARDING WESTLAW CHARGES

Additional charges may apply, depending on your Westlaw subscription. To learn more about potential additional charges, please verify your Westlaw access with your firm's Westlaw plan administrator or Westlaw account manager.

Using this Report

When you click on a link in this report, your internet browser will launch the Westlaw sign-in page. If the document is included in your firm's Westlaw subscription, there is no additional charge for viewing the document. If the document is not included in your Westlaw plan, a warning screen (pictured below) *may or may not* appear during your work with this report, depending on your firm's Westlaw settings. If a warning screen appears, click **Cancel** to avoid an additional charge. To view the document and incur an additional charge, click **View Document**.

Searching for Experts within a Docket

To view the information in the dockets, click the link to the docket. Then click **CTRL + F** on your keyboard and type the expert's last name in the dialog box that is displayed. Alternatively, type the entry number you wish to view. If the docket consists of more than one page, blue hyperlinked page numbers are displayed in the upper-right corner of each Westlaw page. You will need to use CTRL + F to find the expert's name on each page of the docket.

To view PDF documents in the docket, click the **view/download PDF** link beneath the docket entry or the blue link next to the attachment/exhibit.

Selection of Appendix Documents

Appendix document selection includes the following criteria:

- Type of document - deposition or testimony documents are preferred. If no expert documents are available, we choose other relevant documents such as memorandum supporting a motion in limine to exclude the expert's testimony.
- Date of document - more recent documents are preferred.
- Relevance - if there are several recent testimonial documents available, we select those that are involved in a motion to exclude or are topically relevant.

If you desire a different selection of appendix documents in your report, contact us and we will be happy to help.

Appendix One

[\(BACK TO CASE\)](#)

United States District Court, E.D. Louisiana.

Tammie WHITE,
v.
FLORIDA MARINE TRANSPORTERS.

No. 211CV01161. April 1, 2012.

Report of John Doe Ph.D.

Case Type: Maritime >> Jones Act

Case Type: Maritime >> Unseaworthiness

Case Type: Labor & Employment >> Work Place Injury

Jurisdiction: E.D.La.

Name of Expert: Dr. John H.Doe, Ph.D.

Area of Expertise: Engineering & Science >> Toxicologist

Representing: Defendant

Introduction and Qualifications

I am a senior toxicologist and director of toxicology at the Center for Toxicology and Environmental Health, LLC (CTEH®) specializing in risk assessment, exposure assessment, toxicity evaluations, the evaluation of experimental design and methodologies, and assessing causal relationships between chemical exposure and disease. My educational background includes a B.S. in biochemistry with an emphasis in toxicology from Murray State University in 1993, and a Ph.D. in toxicology from The University of Georgia in 2000. My current duties at CTEH® include serving as a consulting toxicologist; leading responses to, and providing toxicological support for hazardous materials incidents; and providing toxicological support to care providers and workers with potential chemical exposures. I have gained extensive knowledge and experience in the mechanisms and toxicities of a wide range of compounds including chlorinated hydrocarbons, volatile organic hydrocarbon solvents (VOCs) including trichloroethylene, polycyclic aromatic hydrocarbons (PAHs), pesticides/herbicides, irritant gases, and heavy metals.

I have extensive experience with hydrogen sulfide exposure through my activities as an emergency-response toxicologist. I have lead air monitoring teams addressing hydrogen sulfide (H₂S) environments of up 50,000 ppm, and industrial hygiene teams addressing H₂S being generated from weathered crude oil. I have personally sampled and monitored for H₂S in a number of situations ranging from tanks of weathered crude oil to oil well blowouts. I have also addressed the clinical toxicology of hydrogen sulfide through the Worker Exposure Response Program, addressing workers with serious exposures to hydrogen sulfide. I have attached a copy of my curriculum vita in Appendix A.

Understanding of Allegations and Purpose of Report

It is my understanding that plaintiff, Mr. Tammie White, alleges exposure to harmful concentrations of H_2S while onboard the vessel BILL SEYMOUR, a Florida Marine Transportation boat that had two barges in tow that were being loaded with vacuum gas oil (VGO) in the early morning hours of January 24, 2011. He had initial complaints of dizziness, nausea, vomiting, ringing in ears, nasal congestion, hearing loss, loss of balance, loss of consciousness, and headache, which resolved in the days to weeks after the alleged exposure. The only long-term health effects that he claims are hearing loss in his right ear, and loss of balance.

Documents Relied Upon

A list of the case-related documents I have relied upon is provided in Appendix B. In addition, I have relied on scientific literature that is cited at the end of this report.

Description of the Alleged Exposure Incident

On January 23, 2011 at approximately 17:00, the BILL SEYMOUR, a Florida Marine Transporters (FMT) towboat with two barges in tow (barges M401 and 403), was tied to dock number two at the ExxonMobil Chalmette refinery located in Chalmette, Louisiana. The barges were facing upstream (west), and the BILL SEYMOUR was moored to the downstream (east) end of the barges. Both barges were to be loaded with vacuum gas oil (VGO) from the refinery. The VGO loading commenced at 20:50 on January 23, and was completed on January 24 at 03:45, a period of six hours and five minutes. The crew of the BILL SEYMOUR consisted of the Captain, Charles German; the Pilot, Mr. White; Deckhand, Ryan Mills; and two tankermen, John Starcher and Rodger Enzor. Mr. White and Captain German alternated 6-hour shifts, with the Captain being on duty from 06:00-12:00 and 18:00-24:00 and Mr. White being on duty from 00:00-06:00 and 12:00-18:00. The loading operation is staffed by one tankermen on the dock who is assigned to "bottle watch." This individual's role is to monitor the fresh air canisters and distribute if needed and to serve in a safety capacity in case significant H_2S exposures occur. Bottle watch responsibilities were shared by Mr. Enzor and Mr. Starcher. Mr. Starcher was on bottle watch on January 23 from 18:00-24:00, and was relieved by Mr. Enzor from 00:00-06:00 on January 24. The loading is also staffed by two tankermen present on the barges that oversee the loading operations. Their duties during the loading operations include walking around the barge monitoring tanks for leaks, spills, water going into the wing tanks, checking for H_2S and safety checks. There were two tankermen present during the loading operation, Mr. Roy Huval from FMT and Mr. Odley Banks from Accutrans. They were both present for the duration of the loading operations. Additionally, Mr. Toni Ghirardi, a surveyor from Saybolt was present on the barges during the loading process to sample the product in the barges during the loading process. Both onshore tankermen and onboard tankermen and the Surveyor wear H_2S badge monitors, and have been trained in H_2S awareness.

Captain German was on duty when the BILL SEYMOUR arrived at the dock and when the loading was initiated at 20:50 on the night of January 23rd. He reports that he didn't smell any odors or have any reports of H_2S detections from the tankermen or bottle watch staff. Capt. German was relieved by Mr. White around midnight on the 23rd. Mr. White and Capt. German had a shift change meeting/job briefing at midnight; during this meeting, Mr. White did not talk about smelling any odors or about feeling ill. When Captain German got off his shift, he went to his bunkroom. He did not smell any odors and did not report any symptoms of illness that night.

(END OF EXCERPT)

Appendix Two

[\(BACK TO CASE\)](#)

2008 WL 8215311 (M.D.Pa.) (Expert Report and Affidavit)

United States District Court, M.D. Pennsylvania.

Wilson SOLT III,

v.

UNITED PLASTIC FABRICATION, INC.

No. 07CV01867.October 17, 2008.

Technical Report Expert Opinion on Cause of Failure during Hoisting of Elliptical Tank of John Doe, Ph.D.

Case Type: Construction & Industrial Accidents >> Rigging

Case Type: Products Liability >> Tools/Equipment/Machinery

Jurisdiction: M.D.Pa.

Name of Expert: John Doe, Ph.D.

Area of Expertise: Engineering & Science >> Mechanical Engineer

Representing: Plaintiff

1. Qualifications of John Doe

Dr. John Doe is a Professor of Mechanical Engineering and Mechanics at Lehigh University. He joined the faculty of Lehigh University in 1995 after working in industrial research and development for 13 years. His research interests have focused on the development of computational tools for the solution of complex manufacturing problems, including welding simulation, semiconductor packaging, plastic processing, interface fracture, and thermal shock behavior. Dr. Doe has developed a number of specialized finite element codes for analyzing fracture behavior, welding simulation, and thermoforming of plastics. He received his Ph.D. and M.S. degrees in Applied Mechanics from Lehigh University in 1981 and 1978 respectively, and his B.S.M.E. from the University of Rochester in 1976. The first phase of Dr. Doe's career was spent at GE's Corporate Research Center, where he made numerous contributions to modeling, analysis and development of experimental methodologies involving large deformation characterization of polymers, blow molding and thermoforming of thermoplastics, glass/metal seals for lighting applications, and computational fracture mechanics. He has received 13 patents and a number of prestigious industrial awards. As Professor of Mechanical Engineering at Lehigh University, Dr. Doe has developed advanced computational methods for failure analysis, and the design of semiconductor and optoelectronic packages. In 1997 he received an NSF CAREER Award for research in designing with thermoplastics for structural applications, and in 2005 was elected a Fellow of ASME (American Society of Mechanical Engineers). From 2002 - 2008 he served as Chairman of the Department of Mechanical Engineering and Mechanics. In addition to teaching courses on Strength of Materials, and Advanced Mechanics of Materials, Dr. Doe has given a number of invited lectures at international symposia on polymer processing and simulation of

welding processes. Dr. Doe's full CV as attached as an addendum to this document.

2. Documents and Information Reviewed

The following documents and information were reviewed by Dr. Doe when conducting this analysis:

1. Deposition of Stan Wojnowski, United Plastic Fabrication, May 1, 2008.
2. Deposition of Michael Ashley, May 16, 2008.
3. Deposition of Wilson Solt, III, Aug. 26, 2008.
4. Deposition of Robert Pavlik, April 22, 2008.
5. Deposition of Frank Mertz, April 22, 2008.
6. Deposition of Derek Lebo, July 23, 2008.
7. Deposition of Jeremy Washousky, April 23, 2008.
8. Deposition of Edward Kline, April 24, 2008.
9. Deposition of Brian Mertz, July 23, 2008.
10. Deposition of John Shanosky, July 23, 2008.
11. Deposition of Brent Wiersma, May 2, 2008.
12. Deposition of Eri Visbeek, May 2, 2008.
13. Documents supplied by Gordon Einhorn labeled UPF001 - UPF0354.
14. Investigation Report, Accident with Injuries, by Edward W. Kline, Environmental, Health and Safety Director, Kovatch Mobile Equipment Corp.
15. Results of Destructive Testing, Duane Priddy, 5/21/2008.
16. Expert Opinion Report, Duane Priddy, 9/5/2008.
17. Mechanical Testing Reports, Laboratory Testing Inc., Hatfield, PA, 7/15/2008 and 7/28/2008.
18. Expert Opinion Report, Dennis C. Deegan, 9/8/2008.
19. CD containing photographs taken by Dennis Deegan, Solt v. United Plastics 340/71734.
20. CD containing photographs taken by Dennis Deegan, Dr. Priddy, Matt Burkart, and MKA.
21. Expert Opinion Report, Matthew J. Burkart, Aegis Corp., 9/8/2008.
22. Expert Opinion Report, Raymond Pearson, Oct. 16, 2008.
23. ASME B30.20-1993, Below-the-Hook Lifting Devices

3. Background

On the afternoon of Monday, July 9, 2007, a 3,500-gallon polypropylene elliptical tank fell, injuring Mr. Wilson Solt. The accident occurred at Kovatch Mobile Equipment Corporation (KME), in Nesquehoning, PA, shortly after the tank had been hoisted from a flatbed truck. The polypropylene tank was manufactured by United Plastics Fabricating, Inc. (UPF) and had been wrapped with a stainless steel covering at L. W. Tank, Inc. (LW), prior to delivery at KME. At the request of Mr. Gordon Einhorn, of the law firm Thomas, Thomas & Hafer LLP, I conducted an investigation to determine the cause of failure. In this capacity, I analyzed the loads acting on the tank components and assisted in developing the appropriate experimental tests needed to determine the loads required for the tank lifting pegs to fail.

The elliptical tank weighed 2940 lbs and was lifted from the flatbed truck using a double-legged chain sling (the tank's weight was measured at KME shortly after the accident). Figure 1 schematically depicts the approximate orientation of the tank just before it fell. The tank was oriented on the flatbed truck with the fill tower end of the tank closest to the rear of the truck. The weight distribution for this particular tank is such, that the center of gravity is shifted away from the tank's geometric center, towards the fill tower end of the tank, causing the tank to rotate as shown in Fig. 1, when hoisted with the chain sling. Because of this rotation, the tank did not clear the rear of the truck before the hoist had reached its maximum lift height. In an effort to get the tank to clear the rear of the truck, Mr. Solt, with the help of another KME employee, Mr. Mertz, lifted the tank a small distance and had the truck driver, Mr. Lebo, drive the truck out from underneath the tank. Shortly after Mr. Lebo pulled the truck away, the tank fell, injuring Mr. Solt. From all accounts, less than 1 minute elapsed before the tank fell after the truck had pulled away.

In the investigation conducted by KME shortly after the accident, it was observed that four lag bolts, which are used to attach the lifting hardware to the tank's four lifting pegs, had pulled out from the lifting pegs, causing the tank to fall. The lifting pegs are 4.75" long cylinders (2" diameter) made from polypropylene plastic and are welded to the support structure on the interior of the tank, i.e., they are embedded into the tank with their top surface slightly protruding from the tank wall. The lifting pegs are an integral part of the elliptical tank structure and serve as the attachment points for steel brackets that are bolted onto the lifting pegs using 1/2" diameter steel lag bolts. In this instance the lag bolts used were 3" long (usually UPF supplies 3.5" lag bolts). The two steel brackets have large diameter holes for connecting lifting chains to the tank. The usual method for attaching a chain sling to the steel brackets is to use a hook and shackle arrangement. UPF supplies a detachable 7/16" shackle that can be used with an appropriately sized hook. The customer, in this case KME, provides that rest of the lift equipment, i.e., the hoist and sling chain with hooks. Figure 2 contains a photograph showing the steel bracket and detachable shackle supplied by UPF, with the actual hook and chain used by KME to lift the tank.

An engineering assessment of what caused the lag bolts to pull out from the polypropylene lifting pegs, requires an analysis of the forces acting on the lifting attachments, as well as experimental measurements of the loads (acting at the appropriate angle) needed to pull the bolts out of the lifting pegs. If the computed loads acting on the tank are close to, or exceed, the measured bolt pull-out loads, then the cause of the accident can be accurately pinpointed.

MR. KELLEY: We've agreed and we have remarked Dr. Dabbah's consultation report of Laura McGrath that is marked as Exhibit 40. It is now correctly marked as Plaintiff's Exhibit 41, and the Exhibit 40 is the newspaper photograph of Shannon Lotito identified by Mr. Grimes at his deposition. That is the correct 40.

So we will start this deposition today with Exhibit 42.

MS. MARIN: What's the date of Dr. Dabbah's medical note?

MR. KELLEY: The consultation report, I believe, is the date of the collision, which I believe is the 15th, dictated on the 15th and transcribed on the 16th.

MS. MARIN: Thank you.

(The document referred to was marked for identification as Plaintiff's Exhibit 41, and a subsequent document was marked as Defendant's Exhibit 42.)

Thereupon:

JOHN DOE was called as a witness and having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. HERMAN:

Q: Please state your full name.

A: John Doe

Q: And your professional address?

A: 6971 North Federal Highway, Boca Raton, Florida.

Q: Mr. Doe, I'm going to show you what's been marked as Defendant's Exhibit Number 42 and ask you to turn your attention to Schedule A, which begins after page two of the subpoena, numbered paragraphs 1 through 10.

A: Yes.

Q: Ask you to please read paragraph one to yourself.

A: (Witness complies).

A: Yes.

Q: Did you bring documents responsive to paragraph one of Schedule A?

A: Yes.

Q: Would you please identify them?

A: Starting with my case file, I have a preliminary case information and progress sheet. I have a request from our office dated June 21, 1999 to the Searcy, Denny law firm, a request for information on this new case which just came in.

Q: Rather than identify everything with particularity, at this point I would just ask you to identify generally parts of your file which are responsive to paragraph one of the subpoena.

MR. KELLEY: David we can't do that. That may take a lot of time. He really hasn't seen that schedule, the way we've been short noticing these things.

What he has on this table is everything that he has in the case, and maybe the easiest way is just mark everything. I mean we can take that kind of time --

Q: Okay, let's do it this way. Mr. Doe, will you please read paragraphs 1 through 10 to yourself of Exhibit Number 42?

A: All right.

Q: Is everything responsive to paragraphs 1 through 10 before us today?

A: Yes.

Q: Is there anything that would be responsive to paragraphs 1 through 10 of Schedule A which is not before us today?

Mr. Kelley sees to be pointing to paragraph number 10.

MR. KELLEY: Yes, there's one down here, number 10, any and all records reflecting any prior cases which -- I feel quite certain there's nothing on this table. You're literally asking him to produce everything, the way I read that, in his career.

Do you have anything on this table other than this case?

A: The only other thing that would pertain to item 10 would be the list of deposition and trial appearances, so in some ways that could correlate with a couple of items in your Schedule A.

Q: Can I see the list of depositions and trials?

A: Yes.

REPORTED BY: RUTH A. CARNEY, RPR

Notary Public

State of Florida at large

from these bags?

A I don't recall the exact number. It was several samples.

Q And why don't you describe for me the process of your failure analysis, the steps that you take --
took to analyze these bags?

A We, excuse me, analyzed first using optical microscopy. We measured the layer thickness, the
composition of the bags; we used infrared spectroscopy to identify the composition of each of the
layers.

First of all, we saw that there was three layers. We separated the layers, analyzed the compo -- the chemical composition of each layer, measured the thickness of each layer. We performed a permeability or barrier measurements against oxygen, and noticed there was no barrier. Oxygen went right through the bags, as if they weren't even there. Then on further examination we noticed actual pinholes in the bag, and that's why it had no barrier to oxygen.

We also noticed under the optical microscope severe abrasion of the inside surface of the bags. And that's what led to the con -- the expert opinion that it was the abrasion of the shelled corn that led to the failure.

Q Tell me about the composition of the bags that you examined in connection with that case.

A The outer layer was polyethylene; it was filled with titanium dioxide.

If you need me to spell anything, let me know.

The middle layer was EVA, or ethylene vinyl acetate copolymer. The inside layer was polyethylene filled with carbon black.

Q Was the outer layer white?

A Yes.

Q Middle layer white?

A Middle layer was clear.

Q Inner layer was black?

A Yes.

Q Had you ever examined a silage bag before you were retained in the Up North litigation?

A No.

Q And this is gonna be a broad question, but do your best to answer it.

A Uh-huh.

Q Is there any -- in your 30-year career at Dow and then subsequent consulting work, is there a similar product to a silage bag that you've done any sort of substantive work relative to?

A Just polyethylene film in general.

Q Okay. And -- and I -- if you'd help me a little bit, is polyethylene film, is it correct that that's all three layers? There's polyethylene film in -- is that the entire product; is polyethylene film with respect to the -- let's just talk about the Up North Ag-Bags?

A Well, it's a laminated tri-layer structure.

Q Okay.

A With two of the layers being polyethylene and the middle layer being a copolymer.

Q Okay. What other products have you worked with that a component of which is polyethylene film?

A Shrink wrap. That's it.

Q I thought you were thinking, I'm sorry.

A Oh, no.

Q Okay. When did you work with shrink wrap?

A 2004.

Q What did you do with shrink wrap?

A Investigated its flammability properties.

Q Was that on behalf of a shrink wrap manufacturer?

A Yes.

Q What was the name of that company?

A Up North.

Q Is that in connection with litigation?

A Yes.

[Note: Pages 20-22 missing in original document]

material, it's called.

It's more elastomeric, if you will.

Q The EPM?

A EPDM is more elastomeric than polyethylene.

Q Stretchy, more stretchy?

A Yes. Yes.

Q You mentioned -- you described your failure analysis for the Up North manufactured bags and you mentioned infrared something, and I --

A Spectroscopy.

Q Spect?

A Spectroscopy. That's s-p-e-c-t-r-o-s-c-o-p-y.

Q Okay. And what is that particular test used for again?

A It generates a chemical fingerprint. Every material has a unique infrared spectrum which no other molecule or plastic -- it's like human DNA almost. So it's used to identify materials. With fingerprint matching it actually -- a computer sorts through the library of infrared spectra until it gets a match and then tells you what the material is.

THURSDAY, JULY 20, 2000 - IRVINE, CALIFORNIA

8:59 A.M.

THE VIDEOTAPE OPERATOR: Good morning. My name is Barry Varanese. I'm a videotape operator with Rosemary Schwartz & Associates located in Santa Ana, California.

This is the videotaped deposition of John Doe, Ph.D., beginning at 9:00 o'clock a.m. on July 20th, 2000 in the matter of Donald LaBelle versus Philip Morris, Incorporated, et al. Case No. 298-

3235-23, taken at 17900 Jamboree Road, Irvine, California. This deposition is being taken on behalf of the defendants.

May we please have introductions beginning with the doctor.

THE WITNESS: My name is John Doe.

MR. EVANS: Jerry Evans, counsel for the plaintiff.

MR. KENDALL: Everett Kendall, counsel for Liggett & Myers.

MR. HENK: Pete Henk, Shook, Hardy & Bacon in Houston for Philip Morris.

MS. POWELL: Virginia Powell of Hunton & Williams for Philip Morris.

MR. REYNOLDS: Andrew Reynolds, paralegal, for Philip Morris.

MR. WEBB: Kevin Webb, Hunton & Williams, for Philip Morris.

MR. OTERO: Brian Otero, also of Hunton & Williams and representing Philip Morris.

Good morning, Dr. Doe.

THE VIDEOTAPE OPERATOR: You may swear the doctor.

John H. DoeJohn Doe, Ph.D., called as a witness by and on behalf of the Defendants, and having been first duly sworn by the Deposition Officer, was examined and testified as follows:

EXAMINATION

BY MR. OTERO:

Q Dr. Doe, I gather that having testified a number of times, you know the rules. I'm going to ask you questions, and you're supposed to give me answers. If you want to take a break at any time, let me know, we'll take a break. I'll be calling a break myself to get some coffee probably in a few minutes.

I want to ask you first off, have you seen the Notice of your deposition in this case?

A Yes, I have.

MR. OTERO: Okay, and we'll just mark that for the record as Exhibit 1 if we could.

(The documents referred to were marked by the Deposition Officer as Defendants' Exhibits 1 and 2 for identification and are annexed hereto.)

Q BY MR. OTERO: And I'll ask you if what's been marked as Exhibit 1 is in fact the Notice that you understand to be for your deposition today.

A Yes.

Q Okay, and then Exhibit 2 is plaintiff's identification of experts in this case. Have you seen this document before?

(END OF EXCERPT)
